Local Company Wins InnoVision Technology Award for Energy Savings

New Technology Drastically Reduces Energy Consumption...

A local company offering "Revolutionary" Energy Savings equipment has won the *2010 InnoVision Technology Award*. In a recent competition for "...innovative application or development of a technology-based product, process, or service..." a panel of industry judges presented *The Technology Consortium Limited (TTC)* the prestigious Award. The recognition was based on the new Energy Savings Technology being offered by *TTC*. Following years of International research, development, trials, and installations, *TTC* has introduced the H.E.L.P. (High Efficiency Local Processor) energy saving system to the North American market.

By consuming up to seventy percent (70%) of industrial electricity, motors waste more energy than any other electrical device. Motors operate over half of the time where full power is not needed or desired; this wastes energy. The H.E.L.P. System saves more than twenty percent of the electricity used in motorized equipment; with many applications being reduced by half.

The Technology Consortium, Ltd. is the exclusive North American distributor of this new Energy Savings technology. Their president, Mr. Ron Hoffman, recently said, "*TTC is proud and honored to receive this prestigious InnoVision Technology award. We are all really excited about this new Energy Savings technology; and proud to introduce it to the United States. With the international response and recognition this new technology is receiving, we will soon need to begin our domestic manufacturing. The energy reducing H.E.L.P. System qualifies for financial incentives as well as LEED credits, and will soon become the "Green" standard for all responsible facilities.*"

Additional information is available at www.4TTC.net or our new website at www.TheTechnologyConsortium.com. You may also request a free facility/equipment evaluation by E-mail at Engineering@4TTC.net.
